

Crowcon to Attend and Give Technical Seminar at Hydrogen Industry Leaders Event

Share

In recent years, there has been a significant rise in attention towards hydrogen, primarily due to its projected pivotal role in the global energy transition and the journey towards achieving net-zero emissions.

As part of our ongoing commitment in this area, we are happy announce our attendance at the upcoming 'Building the Hydrogen Economy' event hosted by Hydrogen Industry Leaders, to take place on Wednesday 5th July at the Radisson Hotel & Conference Centre, London Heathrow.

Hydrogen Industry Leaders (HIL) is a dynamic media platform offering valuable insights into the development and shaping of hydrogen as we strive towards a world powered by clean energy and achieving net-zero emissions. Through their extensive networking platforms, virtual webinars, and physical events, HIL work to actively transform aspirations into actionable solutions.

As well as exhibiting at the event, we are also very pleased to announce that Crowcon's Head of Sales Support Andy Avenell will be delivering a technical seminar at the event. Attendees will have the

English

hear from Andy on the need for gas detection across the entire hydrogen value chain, the dangers that are present and the innovative sensing technologies available.

As well as attending our technical seminar, attendees will be able to hear all about our hydrogen detection solutions from our team in the exhibition area.

MPS sensor technology is tailor-made for hydrogen detection, resolving the limitations of traditional pellistor sensors. MPS™ provides a long life hydrogen sensor that does not require calibration throughout the life cycle of the sensor, without the risk of poisoning or false alarms which leads to significant savings on the total cost of ownership.

We look forward to seeing you at the event and talking all things hydrogen!
